Dear Danny,

As you are aware we began the roof replacement project for our high school and adjacent junior high about seven months ago. After extensive research of various roof systems and application methods we focused in on the Hydro Stop system. During our subsequent meetings we voiced several concerns or potential pitfalls of this product; product application, longevity in local climate, and manufactures commitment to warranty. We inspected local applications as well as the oldest application located in South Carolina and were impressed with the system.

During the installation process I inspected the roof numerous times. Each time I was reassured to see the attention to detail in the application process as well as the ability to perform the work with no disruption to the campus schedule. I was also truly amazed at the temperature difference in the final stages of the roof. We experienced this in our visit to North Charleston in March but it was more remarkable in early August here in Houston. Any roof replacement process has its own special circumstances or challenges. Hydro Stop addressed each our special circumstances in a professional and timely fashion to insure we kept the schedule intact.

In regards to our concern about the manufactures commitment to the roof system, you were on the job site multiple times during each week to inspect the application. Additionally Nick Causey, President of Hydro Stop and other company representatives traveled to Tomball several times to make inspections as well. This critical eye to detail reassured us of Hydro Stop's commitment to the roof system and the high standards of the product/system.

Following Hurricane Ike we experienced no leaks or damage to the system in any of the areas covered by the Hydro Stop system. I am confident that TISD has made a wise choice in selecting Hydro Stop for these projects. We are pleased with the system and have now included it our district standard as base bid for future projects. In closing it has been a pleasure working with you, Nick and other Hydro Stop representatives. I look forward to our continued relationship in future projects.

Sincerely

Mark Tiedt
